ZIMPERIUM®
MOBILE THREAT DEFENSE

Zimperium for Citrix XenMobile

Enabling complete end-to-end mobile threat protection

Citrix XenMobile lets users maximize productivity with their chosen devices:

- Manages your diverse mobile ecosystem from the cloud
- Protects data with or without device enrollment
- Streamlines management with an integrated platform
- Enables the best, most productive mobile experience for users

&

Zimperium zIPS protects mobile devices and their users against malicious cyberattacks:

- Delivers on-device detection of known and unknown threats
- Protects against device, network, phishing and app attacks
- Reports on vulnerabilities and other risks
- Provides detailed threat forensics and recommends remediations

Together, Citrix XenMobile and zIPS enact risk-based policy to prevent a single mobile device from compromising the enterprise.

COMPLETE MOBILE SECURITY

Citrix XenMobile and Zimperium have partnered to provide a complete enterprise mobile security solution that delivers sophisticated threat protection for mobile devices against known and unknown threats to ensure corporate data and networks are not compromised by a mobile attack.

Together, Citrix XenMobile and Zimperium enable enterprises to manage and secure mobile devices against the broadest array of device, network, phishing and malicious app attacks.

Zimperium continuously detects and analyzes risks and threats and provides Citrix XenMobile with the visibility to enact risk-based policies to protect mobile devices.

The integrated solution provides IT Security Administrators with a way to safely enable corporate and BYO device initiatives. The combination enables a balance between empowering mobile employees to be more productive with the device of their choice, while at the same time securing mobile devices and the enterprise against advanced threats.

KEY BENEFITS

Built from the ground up for mobile devices, Zimperium's Mobile Threat Defense (MTD) uses machine learning technology optimized to run on the device without requiring an internet connection. Zimperium's non-intrusive approach to securing mobile devices provides protection around the clock without impacting the user experience or violating user privacy. Built on a scalable architecture and seamlessly integrated with Citrix XenMobile, Zimperium supports the demands of any large enterprise.

HOW ZIMPERIUM INTEGRATES WITH CITRIX XENMOBILE

Real-time protection

Zimperium and Citrix deliver continuous and real-time threat protection to mobile devices managed in XenMobile. The integrated solution protects devices against known and unknown threats to ensure corporate data, user credentials, apps, and networks are not compromised by an advanced mobile attack.

Enterprise-scale security and manageability

Together, XenMobile and Zimperium enable enterprises to manage and secure iOS and Android devices against mobile cyberattacks. Zimperium continuously detects and analyzes threats and provides XenMobile with the visibility to enact risk-based policies to automatically remediate against these attacks.

Seamless integration

The integrated solution provides IT Security Administrators with the ability to safely enable BYOD programs, while securing mobile devices against advanced threats.

FEATURES & BENEFITS	CITRIX XENMOBILE	ZIMPERIUM
Access controls to corporate email, VPN, app delivery and removal	✔	
Secure corporate document sharing and web security	✔	
Ability to revoke access from non-complaint mobile devices	✔	
"Always on" protection on the device	✔	✔
Detect if device has proper security enabled (e.g. pin, encryption)	✔	✔
Jailbreak detection	✔	✔
Root / compromise protection	✔	✔
Network attack (e.g. MITM, rogue access points) detection		✔
OS compromise and exploitation detection		✔
Malicious app and profile detection		✔
Mobile phishing detection		✔
Provide detailed app risk and privacy analysis		✔
Reconnaissance scan detection		✔
Detailed mobile threat intelligence and forensics		✔
